EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Joseph Wrkich (Reg. No. 53,796) on 10/17/2008.

The application has been amended as follows:

Claim 7 has been amended by replacing "A method" in line 1 with "A computer implemented method".

REASONS FOR ALLOWANCE

2. The following is an examiner's statement of reasons for allowance:

The present invention is directed to a system/method for searching a set of information items including video images and displaying results of the search using a self-organizing map, which includes a graphical user interface for displaying a set of information items as a n-

Art Unit: 2164

dimensional array of display points within the self-organizing map, a processor configured to train the self-organizing map using color histograms for each video image as a feature vector when applied to the self-organizing map to identify a plurality of output nodes, a user control for selecting a plurality of video images and specifying a combination of the plurality of selected video images, and a search processor configured to use color histograms of the selected video images to generate a user defined feature vector through a composite color histogram and apply the user defined feature vector to the input of the self-organizing map to identify information items which include video images having color histograms corresponding to that of the user defined selected video images.

The closest prior art of record, Laaksonen et al. (“Content-Based Image Retrieval Using Self-Organizing Maps”, 1999) describes searching images using self organizing map and using separate feature vectors including feature vector for describing the color (e.g., average color and color composition) of images to apply as input to the self organizing map to retrieve images similar to a given set of reference images (see Laaksonen et al., Abstract and pages 542-544).

However, Laaksonen et al. fails to anticipate or render obvious the recited features of “a user control configured to, in response to a user input, select a plurality of video images and to specify a combination of the plurality of selected video images” and “a search processor configured to form a color histogram for each of the user selected video images, to generate a composite color histogram from the specified combination of each of the color histogram from each of the selected video images, to generate a user defined feature vector from the user

Art Unit: 2164

selected video images using the composite color histogram, and to search the set of information items by applying the user defined feature vector to the input of the self-organizing map to identify information items which include video images having color histograms corresponding to that of the user selected video images” as recited in independent claim 1 and similarly recited in independent claims 7 and 13.

These features, together with the other limitations of the independent claims are novel and non-obvious over the prior art of record. The dependent claims 2, 4-6, 8, 10-12, 17 and 18 being definite, enabled by the specification, and further limiting to the independent claim, are also allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”

REMARKS

3. Examiner interpreted “computer readable storage medium” recited in claim 13 as storage device (e.g., removable disk) as disclosed in specification, page 7, lines 2-9.
